

In the Claims:

Please amend claim 11 as follows and cancel claims 12-17:

1. (original) A support comprising:

a first component for supporting a tool; and

a second component for supporting a raised floor;

a third component coupled to the first component and

5 second component; and

wherein:

at least one selected from the second component and
the third component comprises at least a portion of an
adjustable attachment structure allowing at least an

10 initial position adjustment of the second component
relative to the first component; and

most of the weight of the tool is supported by the
support and most of the weight of the tool is not supported
by the raised floor.

2. (original) The support of claim 1 wherein the first
component is located at least near a top of the support.

3. (original) The support of claim 1 wherein the
second component is coupled to the first component in a

manner that allows a height of a horizontal portion of the second component to be adjusted at least initially.

4. (original) The support of claim 1 wherein the support additionally comprises a base.

5. (original) The support of claim 4 wherein the base comprises at least one structure to allow at least one height adjustment of the base.

6. (original) The support of claim 4 wherein the base comprises a tripod.

7. (original) The support of claim 1 wherein the second component comprises an L-shape.

8. (original) The support of claim 1 wherein the second component comprises a block shape.

9. (original) The support of claim 1 wherein the first component and the second component are coupled via a support member.

10. (original) A method of supporting at least a portion of a tool and at least a portion of a raised floor, the method comprising:

placing a support comprising a first component and a
5 second component so that it is supported by a subfloor;

adjusting a height of the second component so that the second component can support the at least the portion of the raised floor; and

causing more of a weight of the at least the portion
10 of the tool to be supported by the first component of the support than the at least the portion of the raised floor.

11. (currently amended) The method of claim 10 wherein the adjusting step comprises locking the second [portion] component in place.
